

HxGN AgrOn PLANTING CONTROL

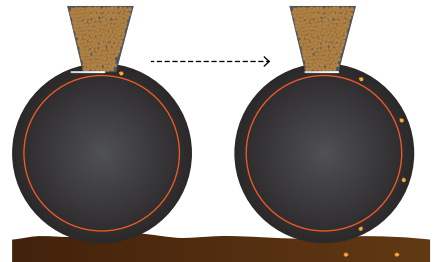

A system that allows automatic control of the planter's clutches, or even shut down hydraulic motors that drive the lines, through the section control system, without the need for stops in agricultural machines. Allows planting and fertilisation to be done at the same time.

Understand how **AgrOn Planting Control** works:

Find out more about **HxGN AgrOn Planting Control**:

- Includes a high precision controller
- Controls up to four simultaneous inputs
- Can work by two automated means: fixed rate and variable rate *
- Can use section control to automatically open and close the planter's clutches *
- Enables dosage control
- Delivers to the user a domain over its operation
- Controls the exact amount of seed rate
- Obtains even better results when used with HxGN AgrOn Planting Monitor
- Applicable to sugarcane and grain crops
- Includes the add-on module HxGN AgrOn Planting Control | Remote Access

*features that are acquired separately and can work together.

RESULTS AND BENEFITS

- Improves plant sowing and distribution
- Reduces the waste rate of inputs: double and failures
- Enables homogeneous density
- Enables better spacing between seedlings
