

## HxGN AgrOn SPRAYER CONTROL

System that automatically controls each spray section and minimises input overlap – avoiding application excess and failures. It also automatically controls the applied flow and guarantees optimal input dosage; even if the speeds of the machine operations vary. The product sends an alarm when the operation is outside of the appropriate range.

Understand how **AgrOn Sprayer Control** works:

Learn more about AgrOn Sprayer Control:

- Automatic control of the spraying section
- Enables manual control of sections
- Allows installation with various valve assemblies
- Monitors and controls the application of up to 2 liquid inputs in up to 16 sections
- Controls flow during application speed variations
- Imports maps defined in the office
- Has input dosage control by applied área
- Can be included the HxGN AgrOn Sprayer Control | Remote Access add-on module
- Applicable for any type of crops

### RESULTS AND BENEFITS

- 20% reduction in inputs with section control
- Prevents overlap in the application of inputs
- Optimisation of applied inputs
- Increased productivity
- Reduction of application failures
