

Hexagon Auto Steering

Developed to improve performance and operation precision, Hexagon's Auto Steering solution provides automatic tractor steering to improve alignment and minimise overlap or gaps during field work.

How **Hexagon's Auto Steering** works:

Benefits and features of Hexagon's Auto Steering:

- Adaptable to most tractors on the market
- Electric - with Hexagon's Track Controller - or hydraulic drive and compatible with steer ready machines and tracked tractors
- Electric drive does not require a wheel angle sensor
- High-performance for better route adjustment
- Integrated to the Ti5 (Electric) or Ti7 and Ti10 displays (Electric or Hydraulic)
- Seamlessly integrated with both hardware and software developed by Hexagon, providing regular updates and fast support
- Can be fully integrated with other precision agriculture products from Hexagon
- Compatible with the Remote Access add-on module
- High-accuracy, even when operating on curves or rough terrain

RESULTS AND BENEFITS

- Guaranteed alignment and reduction of overpassing
- Better use of machines in operation
- Increase of up to 5% in planted area
- Reduction of soil compaction
