Collect diagnostic guide
1 Collecting diagnostic on the onboard controllers

Important

Before starting the procedure below, make sure you have at hand a USB stick to write the diagnostics.

To collect diagnostic data on the onboard controllers, proceed the following way:

1. Select the **Configuration menu** in the operation screen.

![Configuration menu](image)

2. Select the **Settings** option.

![Settings option](image)
3. Change the system mode to **Advanced**.

**Important**
You must have a password to change the system mode. Advanced mode gives you access to more features.

4. Select **About**.

5. Select the **System manager** option.
6. The system warns you that the equipment will need to be restarted. Press Yes to continue.

7. Select the Collect diagnostics option.
8. Select Yes to confirm the collection.

**Important** To collect the diagnostics insert the USB stick in the onboard controller before confirming the operation.

9. The progress bar will be displayed.

10. Wait until the progress bar is complete.
