

## HxGN AgrOn CONTROL ROOM

Structure of command centers that continuously receive online information about running operations, and support the remote management of field processes.

Understand how **AgrOn Control Room** works:

Basic operational management environment of activities performed by the machines in the field, whatever the process to be monitored

- Consultations and Reports
- Online Monitoring
- Geopositioning
- Tracking
- Alarms & Notifications
- Decision Trees
- Activity History

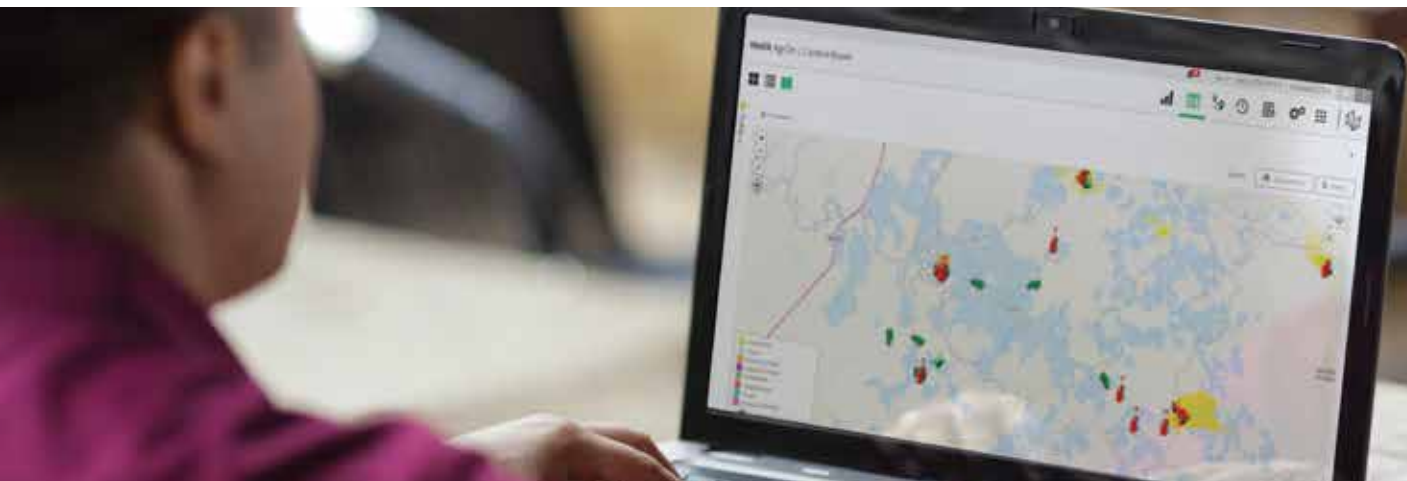

The system also has additional modules specific to each type of activity:

- **AgrOn Control Room | Soil Preparation**
  - Centralised control system that monitors the ground preparation operations performed on the work fronts in real-time.
- **AgrOn Control Room | Planting**
  - Control room dedicated to the management of the specific operations of the Planting process, based on the cycle of cutting, transport, and planting of seedlings or seeds.
- **AgrOn Control Room | Cultivation**
  - Control room dedicated to the management of the specific operations of the Cultivation processes, based on the cycle of loading, transport, and application of inputs.
- **AgrOn Control Room | Harvesting**
  - Real-time monitoring of harvest and transport operations performed in the field.

### RESULTS AND BENEFITS

- Real-time remote monitoring of all activities performed by machines in the field.
- Tracking of hours worked vs. Downtime.
- Generation of reports on operating times, productivity figures and yields per machine.
- Issuing notifications and alerts so that processes flow with maximum efficiency and productivity.
- Constant monitoring between planned activities and operations performed.
- Increased efficiency and synchronisation of all harvesting operations.

### LEARN MORE ABOUT HxGN AgrOn CONTROL ROOM:

- Concept of management based on goals and indicators.
- Sending electronic messages to managers and directors.
- Integration of monitoring and telemetry data with corporate systems for calculating results and paying service providers.
- Integration with legacy databases and Agricultural ERP.
- Modular system, being able to act in conjunction with AgrOn Machine Monitoring and AgrOn Operational Management, for even more assertive results.
- Control and reception system available on Cloud or Local architectures (on-premises).
- Applicable for any type of crop.
- Product available in the AgrOn Cultivation and AgrOn Harvesting portfolio.
