

j5 Action Management Overview

The Problem

Within any industrial operations department, there is a constant allocation of activities, tasks, plans and projects across individuals and teams that requires efficient action management. If these actions are recorded on paper, spreadsheets, word processor documents, emails or disconnected applications, there is a lack of coordination and focus, lowering operations performance.

The National Research Council Canada recommends that an organization's action management system provides delegates with clear directions, focuses on disciplined execution and fosters compliance with plans and standards. It also advises to monitor ongoing adherence to performance, project or operational plans, as well as to manage and address performance issues effectively.

How j5 Action Management Provided the Solution

To remedy these pains, companies across the world utilize j5 Action Management. This application allows users to assign, define, manage and track actions which are related to the processes managed in j5 Operations Management Solutions applications. These actions have a standard workflow which allows users to manage their part of the process with ease. The j5 Action Management application allows users to effectively monitor and complete tasks with clean dashboards, reports and email notifications that are customised to each user, job role or action source.

j5 Action Management users have reported the following benefits:

- Easy to use
- Consistent actions
- Interact actions with operations data
- Saves time
- Eliminates paper, spreadsheets and scattered databases
- Advanced workflow capabilities
- Fast search and filtering
- Integration with other industrial systems
- Integration with other j5 Applications
- Real-time action monitoring
- Web browser-based

“j5 has contributed to the efficient and stable operation of INPEX assets. Information is standardized and accurate.”
