ECOSYS™ MOBILE PLATFORM

YOUR MOST UP-TO-DATE PROJECTS INFORMATION. ANYTIME. ANYWHERE.

The EcoSys Mobile platform allows you to stay connected to your projects anytime, anywhere. Break down collaboration barriers, improve project team visibility, and facilitate information sharing with this easy-to-use solution.

Realize True Mobility for Enterprise Project Performance

On-demand access to real-time information and the ability to communicate quickly and effectively are a vital part of improving projects performance.

Successful project delivery requires input and collaboration by all stakeholders; be it a contractor who observes an issue at the project site, a construction supervisor who needs to review and approve that day's progress from the field, a project controls analyst assessing the impact of a change, or an executive who wants to review the status of their project portfolio while traveling.

Organizations can use the EcoSys Mobile platform to quickly configure mobile apps that directly address the communication and collaboration needs of their projects, or leverage the pre-configured apps available right out of the box.

"Out-of-the-Box" Apps

For organizations seeking to quickly adopt industry best practices to improve projects performance, EcoSys provides out-of-the-box mobile apps for the most in-demand requirements. These apps can be tailored to align with an organization's specific data attributes and business rules:

Progress Reporting: Enables users to record project progress in real-time and submit to supervisors for review and approval. Progress can be recorded in various methods, based on the type of work being executed. Eliminates the need for paper-based field reporting processes and promotes improved efficiency while providing a user-friendly experience for all disciplines.

Change Management: Allows users to easily create project change requests and start the review and approval workflow. It provides an increased level of efficiency and visibility throughout the change management lifecycle and allows for proper assessment of course correcting options.

Issues Tracker: Empowers individuals to quickly report and manage issues identified while working on a project. Users can report potential problems and concerns through text and/or photos and record updates. Managers can review and promote submitted issues.

Easily Build Your Own Unique Apps

Mobile app development can be critical to an organization's ability to remain competitive. Efficiency gains by project teams will depend heavily on enterprise mobility, and data analytics driven by mobile apps will enable better business decisions. The ability to create and deploy mobile applications empowers the projects organization to deliver this increasingly important business need without increasing the burden on internal IT teams.

In addition to pre-packaged mobile apps, the EcoSys Mobile platform allows you to easily build your own unique mobile apps using the same configuration approach used throughout the EcoSys Enterprise Project Performance platform. Apps are created without any IT programming or integration effort. Once installed on mobile devices, they will self-update automatically as new configurations are published. They offer rapid and easy deployment, reducing implementation time from months to days.

The EcoSys Mobile platform can be adopted to support many processes including:

- Executive reporting and analytics
- Daily reporting of activities and status
- Safety Incident reporting
- Project forecast updates
- Alerts and notifications
- PR and PO approvals
- Funding request approvals

Technology

EcoSys Mobile applications are available for Android and iOS smartphones and tablets. They operate in both online and offline modes. The EcoSys Mobile platform supports advanced security requirements, including robust encryption and authentication options.

Demand for enterprise mobile app development is growing

5x

faster than internal IT's capacity to deliver.

Key Benefits

Accessibility

Executives and project teams can stay connected, with easy access the most up-to-date project information anytime, anywhere.

Visibility

Understand project status instantly with access to real-time information, and make better, more informed, and more proactive decisions.

Collaboration

Facilitate input and involvement from all project stakeholders for improved projects performance. Project teams can work better together to deliver successful projects.
