

HxGN AgrOn SUBSOILING CONTROL

Soil preparation implement rod depth monitoring system to assist the operator to execute ensuring quality. Sensors installed in the implement allows to capture every second the depth reached, providing detailed information of the activity, enhancing the complete monitoring of the operating quality.

Understand how the **AgrOn Subsoiling Control** works:

Learn more about the **AgrOn Subsoiling Control**:

- The entire operation is shown through the display screen in real-time
- It is possible to set up alerts and receive warnings every time it is not operating within the desired depth range
- Data connection via 3G/4G, flash memory or satellite
- For report building and better management of the operation, it should be worked out together with the HxGN AgrOn Operational Management
- It has the add-on module HxGN AgrOn Subsoiling Control | Remote Access
- Available in Ti5 or Ti7 displays
- Applicable for any crop type

RESULTS AND BENEFITS

- Removes manual plot depth sampling operation
- More accurate subsoiling throughout the field - monitors every 1s operation
- Increases planting quality
- Provides more information about planting
- Improves seedling growth
